

AMS SiteManager

Improving asset management, safety and customer service

The AMS SiteManager is a quad band/GPRS/GPS tracking unit designed to be deployed globally within portable buildings or generators. The entry level of the range but designed to capture generator use only . Each event includes; location, date, time, speed, direction and status information. Events include:

- power on
- power off
- Starting
- Stopped
- Running

This information is delivered via our web site delivering information to those that need it.

See AMS web interface document

Employment

The BT SiteManager facilitates retrieval of usage data within the portable building and generator market some uses include:

- **Running Hours** understand the generator running hours to enable;
 - Pro-active servicing
 - Over use invoicing
- **Theft Recovery** the unit will always be visible by GPS location data if removed from site.
- **Fleet management** understand the utilisation of the fleet and manage stock

“The natural choice”

Dennis Hughes, MD GenQuip

GenQuip

GenQuip & Groundhog’s philosophy is not just about supplying a range of equipment – we have fundamental core beliefs that penetrate the whole organisation. The company has a doctrine encompassing product development, employee advancement, supplier affiliations and most importantly customer relationships.

The GenQuip/Groundhog partnership has developed a complete range of welfare units. Continuous product development is ongoing and bespoke models can be produced for specific requirements The Site Manager range of products add value to our offerings and is flexible enough to be employed in all of our products.
