

AMS SiteManagerPlus

Improving asset management, safety and customer service

The AMS SiteManagerPlus is a quad band/GPRS/GPS tracking unit designed to be deployed globally within portable buildings or generators. A complex and versatile unit with multiple capabilities to give complete understanding of an assets use. Each event includes; location, date, time, speed, direction and status information. Events include:

- power on
- power off
- Starting
- Stopped
- Running
- 8 Input monitors
- 8 output controls

This information is delivered via our web site delivering information to those that need it.

See AMS web interface document

Optional Capability

The AMS SiteManagerPlus facilitates multiple applications within the portable building and generator market:

- **Level Monitors** delivers real time data on the levels of liquids such as fresh and soiled water, effluent and fuel.
- **Remote Immobilisation** the unit can prevent the generator being started and shut it down remotely.
- **Service Reminder** generator service requirement notification alerts.
- **Door monitoring** monitor the use of the portable building and staff usage

“The natural choice”

Dennis Hughes, MD GenQuip

GenQuip

GenQuip & Groundhog’s philosophy is not just about supplying a range of equipment – we have fundamental core beliefs that penetrate the whole organisation. The company has a doctrine encompassing product development, employee advancement, supplier affiliations and most importantly customer relationships.

The GenQuip/Groundhog partnership has developed a complete range of welfare units. Continuous product development is ongoing and bespoke models can be produced for specific requirements The Site Manager range of products add value to our offerings and is flexible enough to be employed in all of our products.
